                                                                                                            DNA encoding calcium receptor polypeptide(s) - useful for therapeutic purposes, e.g. hyperparathyroidism and osteoporosis (claim 15; Columns 125-134; 174pp; English.

The present sequence encodes human parathyroid cell calcium receptor 4.0 (HuPCaR 4.0).

The specification includes details of molecules that can modulate one or more inorganic ion receptor activities, and antibodies and antibody fragments targetted to inorganic ion receptor proteins. The proteins, nucleic acids and antibodies may be used to treat disorders by modulating one or more inorganic ion receptor activities, preferably disorders of calcium homeostasis, e.g. hyperparathyroidism and osteoporosis.

PS Example 27: Fig 49: 174pp; English.

CC The Human parathyroid calcium receptor gene encodes a 1078 amino acid

CC protein. The tissue from which the receptor and receptors from bovine

CC parathyroid and rat kidney are derived, respond to changes, and control

CC changes, in calcium ion concentration, e.g. parathyroid hormone regulates

CC Ca2+ homeostasis in blood and extracellular fluid, and kidney function

CC claim to the compound to change for the compound to change for the compound to change for the compound to compound to compound the calcium

CC recombinantly) can be used to screen for compounds that modulate calcium

CC receptor activity, especially those that can be used to treat diseases

CC associated with the receptors in these tissues. They can also be used

CC traise antibodies for use in detection assays.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
        PT Screening for calcium receptor-active compounds - by recombinant PT expression of nucleic acid encoding calcium receptor and determining PT the effect of compounds on calcium receptor activity the effect of compounds on calcium receptor activity PS Claim 1; Fig 49; 179pp; English.

CC A method has been developed of screening for a compound able to affect CC one or more activities of a calcium receptor (CR) comprises: (A) CC contacting a recombinant cell with a test compound, where the CC recombinant cell comprises a recombinant nucleic acid expressing the CR, CC provided that the cell does not have functional CR expression from CC endogenous nucleic acid; (B) determining the ability of the test CC compound to affect one or more activities of the calcium receptor; and CC (C) comparing the ability with the ability of the test compound to CC affect the one or more CR activities in a cell not comprising the CC comparathyroid CR, designated a pHuPCaR 4.0. The nucleic acid sequence of CC pHuPCaR 4.0 can be used as part of the recombinant nucleic acid in the CC method described above. The compounds identified can be used to treat CC diseases or disorders characterised by abnormal calcium homeostasis, e.g. Cd disorders. They can also be used for the treatment of diseases and CC disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   07-JUN-195; 480751.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           calcium
Bos sp.
Key
CDS
The present sequence encodes bovine parathyroid cell calcium receptor I (BoPCaR I).

The specification includes details of molecules that can modulate one or more inorganic ion receptor activities, and antibodies and antibody fragments targetted to inorganic ion receptor proteins. nucleic acids and antibodies may be used to treat disorders by modulating one or more inorganic ion receptor activities, preferably disorders of calcium homeostasis, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Bovine

                 Calcium receptor poly:peptide(s) - useful for drug screening or antibody production

Example 25; Fig 47; 174pp; English.

The bowine parathyroid calcium receptor gene encodes a 1085 amino acid protein. The tissue from which this receptor and receptors from human parathyroid and rat kidney are derived, respond to changes, and control changes, in calcium ion concentration, e.g. parathyroid hormone regulates ca2+ homeostasis in blood and extracellular fluid, and kidney function alters through changes in Ca2+ levels in juxtaglomerular and proximal tubule cells in the kidney. The purified receptors (produced that the case of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     kidney;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   recombinant nucleic acid. The present sequence encodes boving parathyroid CR, designated a BoPCaR 1. The nucleic acid sequence of BoPCaR 1 can be used as part of the recombinant nucleic acid in the method described above. The compounds identified can be used to treat diseases or disorders characterised by abnormal calcium homeostasis, e.g. hyperparathyroidism, osteoporosis and other bone and mineral-related disorders. They can also be used for the treatment of diseases and disorders associated with disrupted Ca2+ responses, e.g. seizures, stroke, spinal cord injury, hypoxia-induced nerve cell damage such as in cardiac arrest or neonatal distress, epilepsy, neurodegenerative diseases such as Alzheimer's disease, Huntington's disease and Parkinson's disease, dementia, muscle tension, depression, and anxiety.
